SUMMARY

Senior Software Engineer with 5+ years of experience architecting and scaling distributed systems, highly available microservices, and event-driven architectures on AWS. Orchestrated **cross-team initiatives across 10+ teams** for a **Prime Day event**, achieving **99.9% uptime**. **Designed platform serving 7M+ MAU, expedited campaign launches by 94%, performed zero-downtime backfill of 48M+ records, and built a fault-tolerant system reducing errors by 92% (\$1.3M+ annual savings)**. Expertise in designing **multi-tenant, self-service platforms** that drive velocity and scalability.

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, Python, Scala, SQL, C, C++, JavaScript, HTML/CSS,
- **Frameworks:** Spring Boot, gRPC, REST APIs, Event-Driven Architecture, MySQL, NoSQL, Spark, Kafka, Redis
- **Cloud Infrastructure:** AWS (Lambda, ECS, CDK, EC2, SQS, SNS, S3, DynamoDB, AppSync, Glue, CloudWatch, IAM, EventBridge, AppConfig), GraphQL, Docker, Kubernetes
- **Engineering Practices:** System Design, CI/CD Pipelines, Observability (Tracing, Logging, Metrics), On-call Operations, Load Testing, Integration Testing, Canary Deployments, Mentoring, Code Reviews

WORK EXPERIENCE

Amazon.com Services LLC - Software Development Engineer - 2 (L5) - Seattle, WA

Feb 2021 - April 2026

Alexa Shopping - Campaign Management Platform

- Led design and development of a greenfield campaign management portal (Spring Boot, EC2), delivering backend CRUD APIs and frontend features. Adopted by **10+ internal teams** to manage **20+ campaigns** reaching **7M+ MAU**.
- Engineered an API-driven automation eliminating manual cross-team coordination, accelerating campaign launch time by **94% (3 days to 2 hours)**.
- Developed OIDC authn with DynamoDB-backed sessions and fine-grained authz, enabling self-service access control and minimizing permission turnaround from **24 hours to <1 minute**, eliminating manual approvals.

Amazon Compensation System - Global Expansion

- Re-architected a single-tenant payroll compensation system to a multi-tenant platform, scaling from **1M to 2M employees** (L1-L3 level); Onboarded **2 businesses (7 planned)** in collaboration with BI and compensation teams.
- Designed modular, workflow-driven components replacing a monolithic compensation processor, enabling configurable business-specific compensation logic and cutting business onboarding time by **70%**.
- Executed a zero-downtime backfill for **48M DynamoDB production records** using AWS Glue to introduce business identifier, achieving **100% data consistency** via validation and reconciliation scripts.

Alexa Shopping Prime Day - Org Lead & Team Lead

- Spearheaded cross-functional scaling initiative, driving technical alignment across **10 engineering teams**, unblocking critical dependencies, and delivering **7 milestones** for Amazon's **Prime Day Sale** event 2023.
- Owned end-to-end team peak readiness scaling for **6 Alexa Shopping microservices**, achieving **99.9% availability at 300 TPS peak load** through capacity planning, load and stress testing, and coordinated dependency scaling.
- Debugged deprecated scaling formulas, optimizing EC2 over-provisioning by **80%** and saving **\$10K annually**.

Amazon Compensation System - Shift Differential API Migration

- Migrated AWS AppSync shift differential API from pipeline resolvers to a serverless Lambda-based architecture, achieving **27% reduction in P90 latency**.
- Implemented fault-tolerant fallback mechanism, reducing shift differential calculation errors by **92% (4% to 0.3%)**, saving **\$1.3M annual compensation losses**.
- Drove **phased rollout strategy** with automatic rollback via AWS AppConfig feature flags, decoupling data source transition from business logic with **zero service interruption**.

EDUCATION

- **Master of Computer Science** - North Carolina State University, NC, USA - **GPA: 4.0/4.0** **Aug 2019 - Dec 2020**
- **Bachelor of Computer Science** - IIT Bhubaneswar, India - **GPA: 3.5/4.0** **Jul 2015 - May 2019**
